Getting Started

> 👋 Hello and welcome to marqably 🎉
>
> This guide aims to provide a convenient starting point that helps you get started. This wiki itself is a mixture or best practices and issues that people encountered and wrote entries about. I'll try to give an overview of that the different sections are and where to start.

- Private (https://app.clickup.com/2457460/docs/2azvm-512/2azvm-15655) is a somewhat up-to-date list of all **opinionated best practices** at marqably.

- Private (https://app.clickup.com/2457460/docs/2azvm-512/2azvm-15475) is a somewhat up-to-date list about **code formatting** and general, **non-opinionated best practices**.

- Private (https://app.clickup.com/2457460/docs/2azvm-512/2azvm-7641) has a convenient checklist for moving to production.

- Private (https://app.clickup.com/2457460/docs/2azvm-512/2azvm-15495) is a good place to look into, when you are working on a legacy project that does not follow the current best practices. This page contains all the pages that have been considered outdated and therefore moved into another place. The page structure inside of this Archive reflects the page structure of Private (https://app.clickup.com/2457460/docs/2azvm-512/2azvm-351).

- The other pages inside of Private (https://app.clickup.com/2457460/docs/2azvm-512/2azvm-365) hold various pieces of information about different topics in various states of up-to-dateness. **Please refer to the official docs rather than relying on the information on these pages.** I'm not saying the pages are bad or outdated, they might hold very valuable information and tweaks about things, but they have been last touched quite a while ago and the tools might have changed in the meantime. So don't just rely on this wiki, please always refer to the official docs for certain tools as well.

- All the code quality tools are either pre-configured or can easily be integrated into JetBrains IDEs and VSCode. Please take a look at the PR that configures the tools for the avalley-workbench repo: https://git.duko.at/avalley/avalley-workbench/-/merge_requests/17/diffs?commit_id=408d018f3d5662af33b81a7ef14c09e11bcfe5ae and the official JetBrains docs: https://www.jetbrains.com/help/phpstorm/php-code-quality-tools.html
